

INSTALLATION INSTRUCTIONS FOR ROADEYESCAMS RECDUO AND RECPR0

1 - Remove the socket head cap screw and lock washer from the mount with the supplied hex key. Place the dash cam into the mount and reinstall the bolt and lock washer as shown above.

2 - Most compatible mirrors have a stem between the mirror and the windshield that has a pivot on both ends. We recommend that you try moving the mirror upward for a cleaner install. Move the stem upward using the windshield pivot only. Adjust the mirror to your normal viewing position using the mirror pivot only. Notice the higher location of the mirror as shown above.

3 - This mount was designed to fit rear view mirror stems that are 7/8" or 3/4" in diameter. If the mount is too big to clamp onto your RVM stem, wrap the supplied bushing material (1/16" x 3/8" x 2-1/2") around the stem before tightening the mount. This will reduce the inner diameter of the mount to 3/4".

4 - Install this mount from the passenger side of the vehicle. Remove the right half of the mount by removing the two socket head cap screws and the lock washer as shown above.

5 - With the left half of the mount still attached, position the mount around the mirror stem as shown above. Reattach the right side of the mount. Make sure the lock washer is still on the lower screw and tighten until the screw is fairly snug. Leave the top screw loose so the mount can slide along the mirror stem and rotate to the desired location. Use the adjustments shown above for the optimum placement of your dash cam.

CAUTION

DO NOT use this mount if it interferes with the adjustability or the operation of your rear view mirror in any way.

DO NOT use this mount if the dash cam creates an unsafe viewing obstruction.

DO NOT ATTEMPT TO MODIFY THIS PRODUCT. Consult the manufacturer for assistance.
