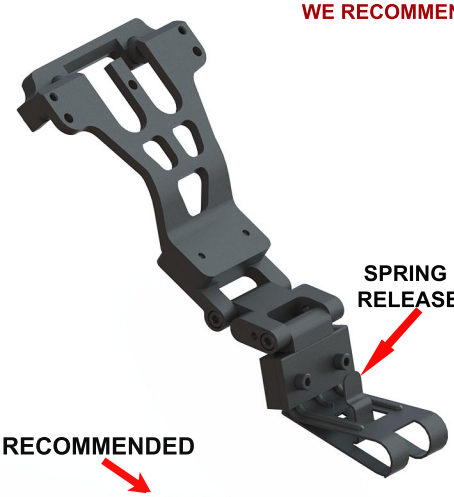
BlendMount® Innovative Mounting Solutions

ESCORT BELTRONICS

PLEASE READ THESE INSTRUCTIONS THOROUGHLY BEFORE INSTALLING THIS MOUNT
WE RECOMMEND INSTALLING THIS MOUNT FROM THE PASSENGER SIDE OF THE VEHICLE

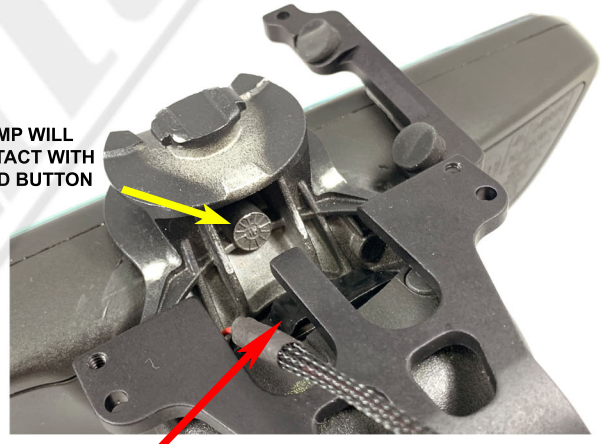


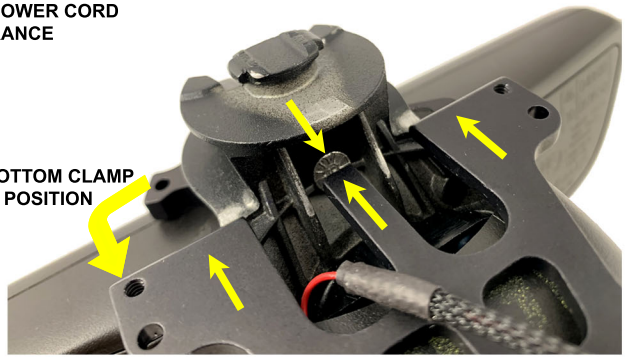
RECOMMENDED

SCAN FOR INSTALL VIDEO OR
VISIT BLENDMOUNT.COM/CHEVROLET/C8

1 - Install and remove your radar detector (RD) onto the mount before installing it on the rear view mirror so you can observe how the spring clip functions. **When used properly, the spring clip avoids putting excessive pressure on the mirror when installing and removing the radar detector.** To release tension from the spring clip, simply squeeze the release tab and the back side of the mount together as shown above. This will lower the bottom portion of the spring clip allowing you to slide the RD on and off the mount. To install the RD, push the RD release button and slide the RD onto the spring clip as far as it will go. Then release both the tab and the release button. Slide the RD toward you just slightly until you hear it lock into position. To remove the RD, squeeze the release tab with one hand and press the RD release button with the other hand and slide the RD off of the mount.

DO NOT REMOVE MIRROR FROM VEHICLE
IMAGES BELOW ARE FOR ILLUSTRATION PURPOSES ONLY





2 - We recommend sitting in the passenger seat when installing this mount and placing a towel over the dashboard. **If you are installing a MirrorTap Power Cord to power your radar detector, it needs to be installed before installing this mount.** Remove the bolt from the right side of the bottom clamp and loosen the left bolt 2-3 revolutions as shown above.Swing the bottom clamp approximately 90 degrees towards the driver's side which will allow you to slide the mount between the headliner and the top of the mirror.

3 - The 2 pictures above show you what you can not see when you are installing this mount. Before sliding the Top Clamp into position, make sure the MirrorTap Power Cord is positioned within the open channel of the top clamp as shown above. Push the top clamp towards the rear of the vehicle trying to keep it somewhat centered left to right.The top clamp will wedge between the mirror and the headliner as you are pushing rearward until it makes contact with the round button of the mirror as shown above. Rotate the bottom clamp back to it's home position and reinstall the bolt making sure it still has the lock washer on it. Tighten the bolt 2-3 revolutions.

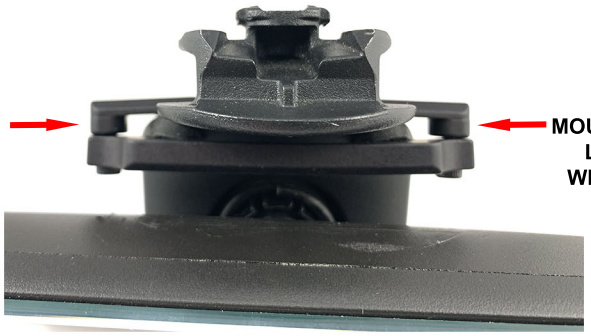
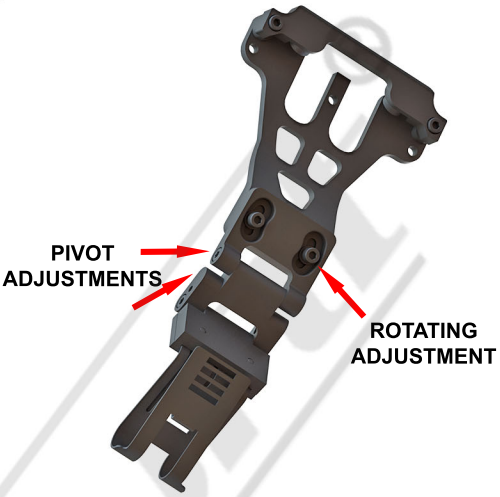
ESCORT BELTRONICS



MOUNT IS CENTERED LEFT TO RIGHT WITH THE MIRROR



4 - At this point, both Clamp Bolts should be loose which will allow you to move the mount from side to side untill it is centered with the top of the mirror as s4own above. When the mount is centered, start to tighten both of the Clamp Bolts. Move the mirror if necessary to access the bolts with the long al4en wrench provided. Tighten one bolt 1-2 revolutions and then tighten the other bolt 1-2 revolutions as well. Keep alternating tightening the bolts untill they are both fully tightened. You will notice the 2 rubber pads will compress as you are tightening. The rubber pads will protect the mirror from getting scratched.

5 - Install your radar detector onto the mount. Use the adjustments shown above to adjust the RD to your desired position. We recommend adjusting the mount so the V1 is as close to the bottom of the mirror as possible keeping in mind that when the V1 is removed it will slide under the mirror. When the rotating adjustment is used to rotate the RD towards the driver, the footprint of the RD is reduced. Be sure to securely tighten all of the adjustment bolts after the adjustments are made. This mount is made of aircraft grade aluminum so you can securely tighten all of the bolts without stripping the aluminum.
