

INSTALLATION INSTRUCTIONS FOR THE UNIDEN R7 RADAR DETECTOR

Your rear view mirror has minimal clearance between the back side of the mirror and the mirror stem. It is very important that this mount is installed correctly to ensure mirror adjustability is retained.

PLEASE READ THESE INSTRUCTIONS THOROUGHLY AND INSTALL THIS MOUNT FROM THE PASSENGER SIDE OF THE VEHICLE.

NOTE: For illustration purposes, the mount and rear view mirror shown in these instructions may look slightly different then YOUR mount and rear view mirror.

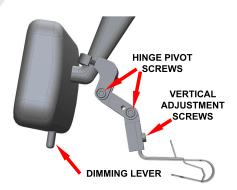

1 - Install and remove your radar detector (RD) onto the mount before installing it on the rear view mirror so you can observe how the spring clip functions. To release tension from the spring clip, simply squeeze the release tab and the back side of the mount together as shown above. This will lower the bottom portion of the spring clip allowing you to slide the RD on and off the mount. To install the RD, squeeze the release tab and slide the clip into the RD until it locks into position. To remove the RD, squeeze the release tab with one hand and press the RD release button with the other hand. Once the RD slides about 1/8" you can let go of the RD release button and slide the RD off of the spring clip. When used properly, the spring clip avoids putting excessive pressure on the mirror stem when installing and removing the RD.

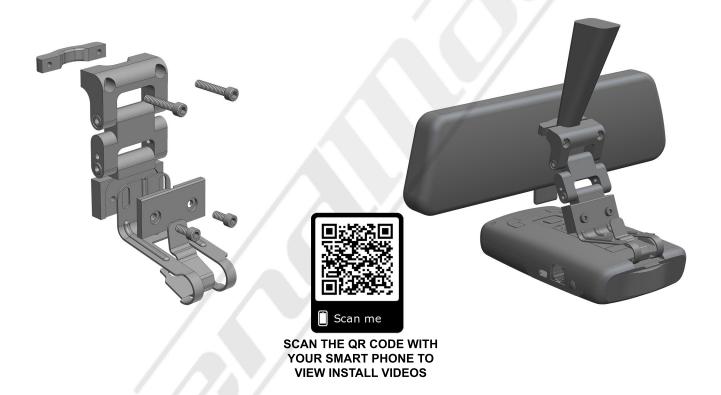

3 - Install the mount while sitting in the passenger side of your vehicle. Remove the two socket head screws so the top portion of the mount may be removed. Position the mount on the bottom of the stem as shown above. Reattach the top portion of the mount. Tighten both screws evenly making sure it is in the correct position as shown above. Tighten both screws until mount is securely attached to the mirror stem.

4 - Install the RD onto the mount. We recommend you adjust the RD so it is as close to the bottom of the mirror as possible. Using the vertical adjustment and orienting the double pivot center link, adjust RD upward as far as possible while making sure the mirror dimming switch is still accessible. After all adjustments are made, be sure to check that the pivot and vertical adjustment screws are tight. Grab the long arm of the allen wrench to assure that these screws are securely tightened.

STEP 5 - If the RD is too close to the bottom of the mirror, You may access the buttons on top of the RD by gently pushing downward on the front of the RD with one finger and push the desired button with another finger. Then allow the RD to return to it's original position by gently letting it spring upward. When accessing the buttons, be sure to push the RD downward just enough for your finger to fit between the RD and mirror. **Do not push down more than what is needed.**
