### INSTALLATION INSTRUCTIONS FOR VALENTINE ONE MOUNT RADAR DETECTORS

### THIS MOUNT MUST BE INSTALLED FROM THE PASSENGER SIDE

Your rear view mirror has minimal clearance between the back side of the mirror and the mirror stem. It is very important that this mount is installed correctly to ensure mirror adjustability is retained.

### PLEASE READ THESE INSTRUCTIONS THOROUGHLY BEFORE INSTALLING THIS MOUNT

NOTE: For illustration purposes, the mount and rear view mirror shown in these instructions may look slightly different then YOUR mount and rear view mirror.

Remove the two suction cups that are on your existing V1 Gen1 or Gen 2 windshield mount. The two holes that were used to secure the suction cups are now used to attach the BlendMount.

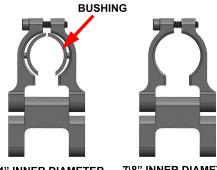

Remove the lock washer and nut from the button head screws and place the BlendMount assembly onto the V1 windshield mount.

Re-attach the lock washer and nut and tighten with the supplied allen

3\4" INNER DIAMETER 7\8' WITH BUSHINGS WI

7\8" INNER DIAMETER WITHOUT BUSHINGS

Grab the mirror and move the stem upward using the windshield pivot only

Mirror stem can pivot left/right to point radar detector where desired

This mount was designed to fit rear view mirror stems that are 3/4" or 7/8" in diameter. If the mount is too big to clamp onto your mirror stem, use the two bushings.

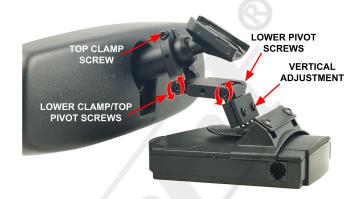

Most compatible mirrors have a stem between the mirror and the wind-shield that has a pivot on both ends. We recommend that you try moving the mirror upward before installing the mount. Grab the mirror and move the stem upward using the windshield pivot only. Adjust the mirror to your normal viewing position using the mirror pivot only. Notice the higher location of the mirror as shown above.

NOTE: The mirror stem may move side to side as well. Make sure the stem points straight ahead so the RD does too.

# BlendNovi Innovative Mounting Solutions

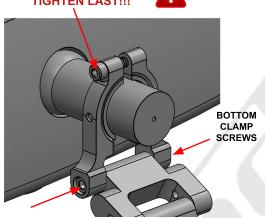

Install the mount while sitting in the passenger side of your vehicle. Remove the right-top portion of the mount and position the mount around the mirror stem as shown above. Reattach the right side of the mount. Make sure the lock washer is still on the lower clamp screw. Leave the top screw loose so the mount can slide along the mirror stem and rotate to the desired location. There may be a plastic oval clip around a wire and the stem, the clip must be removed to install the mount. Lightly snug screws, do not fully tighten until last step.

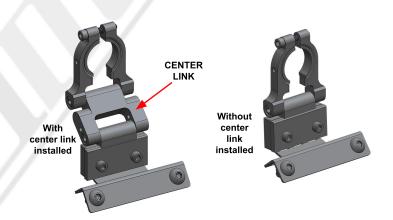

Install the RD onto the mount. Make the necessary adjustments as shown above. Using the upper and lower pivots, and the vertical adjustment, leave enough room below bottom of mirror to allow access to buttons on top of radar detector.

# **TOP CLAMP SCREW** TIGHTEN LAST!!!

8 At this point your RD should be positioned where you want it and the screws should be snug. Loosen the top clamp screw so both the lower clamp screws can be fully tightened. Grab the long arm of the allen wrench to assure that these screws are securely tightened, you will not strip out the tapped holes in the aircraft grade aluminum. The bottom clamp screws should be fully tightened before tightening the top clamp screw. If the top screw is tightened before the bottom screws are, the clamp will loosen over

## BLENDMOUNT CENTER LINK

The center-link may be removed if an overall shorter mount length is needed, depending on your rear view miror and desired position for the radar detector.
