

Your rear view mirror has minimal clearance between the back side of the mirror and the mirror stem. It is very important that this mount is installed correctly to ensure mirror adjustability is retained.
PLEASE READ THESE INSTRUCTIONS THOROUGHLY BEFORE INSTALLING THIS MOUNT

NOTE: For illustration purposes, the mount and rear view mirror shown in these instructions may look slightly different then YOUR mount and rear view mirror.

STEP 1 - Remove the two suction cups that are on your existing V1 windshield mount. The two holes that were used to secure the suction cups are now used to attach the BlendMount.

STEP 2 - Remove the lock washer and nut from the button head screws and place the BlendMount assembly onto the V1 windshield mount. Re-attach the lock washer and nut and tighten with the supplied allen wrench.

STEP 3 - Loosen the clamp screw so the top section separates from the mid section. This will provide the necessary clearance to slide the mount over the mirror stem as shown above. **Adjust the mirror parallel to the windshield and slightly upward for ease of installation.**

TOP AND MID SECTIONS MUST TOUCH AT THE PIVOT POINT BEFORE CLAMP SCREW IS FULLY TIGHTENED

STEP 4 - BEFORE FULLY TIGHTENING THE CLAMP SCREW, MAKE SURE THE TOP AND MID SECTIONS ARE TOUCHING AT THE PIVOT POINT. If you can not get them to touch at the pivot point, you have an **incompatible mirror type** for this mount.

STEP 5 - Position the mount as far forward as you can. Tighten the clamp screw until the Top and Mid Sections are **slightly snug** around the mirror stem. You should still be able to rotate the mount.

STEP 6 - Rotate the mount so it is parallel with the bottom of the mirror. Tighten the clamp screw until the mount is securely attached to the mirror stem. Do not over tighten the clamp screw.

CLAMP SCREW MUST BE SLIGHTLY LOOSENED BEFORE MAKING ROTATING ADJUSTMENT. BE SURE TO RETIGHTEN AFTER ADJUSTMENT IS MADE.

STEP 7 - Install your radar detector onto the mount. Use the adjustments shown above to adjust the RD to your desired position. We recommend adjusting the RD as close to the bottom of your mirror as you can. Be sure to tighten the vertical and pivot adjustment screws after the adjustments are made. For the Pivot adjustment, grab the long arm of the allen wrench for maximum leverage. You will not strip the threaded holes in the aircraft grade aluminum.

CAUTION

DO NOT use this mount if it interferes with the adjustability or the operation of your rear view mirror in any way.

DO NOT use this mount if the radar detector creates an unsafe viewing obstruction.

DO NOT ATTEMPT TO MODIFY THIS PRODUCT. Consult the manufacturer for assistance.
